

## Additional convenient functions

### Touch panel for effortless operation

The intuitively designed user interface enables customers to complete their orders simply, with a minimum of steps, eliminating unnecessary work for your staff.

### Accepts a variety of storage media

Multiple media slots accept all major digital camera storage media. An infrared port and media slots, including a mini-SD slot, let customers order prints from their camera phones. And Bluetooth compatibility can be added as an option.

### Flexible networking capabilities

Digital Photo Centers can be connected via a network server to a centrally located Digital Minilab Frontier, making it possible to offer digital camera print services from multiple locations, with no need for customers to visit the shop to place their orders. Installation of terminals at shopping malls, amusement parks, and other places where people gather can lead to a significant increase in print business.

### Multi-lingual support

The Digital Photo Center can display up to eight languages at a time. Customers can select their language of choice by simply pressing a button on the screen.

### Built-in receipt printer

A receipt printer is built-in to each Digital Photo Center unit. Customers present their receipts at the counter when ordering and picking up prints to prevent mistakes and mix-ups with orders. The convenient front-loading design makes it easy to replace receipt paper.
